Business Intelligence & Database Specialist

Job Description

Digital Tempus offers an entrepreneurial environment and the opportunity to grow with an innovative, fast-growing company. Within a dynamic, team-oriented setting, ambitious new hires will have the opportunity to participate in challenging work with global companies across multiple industry sectors and markets.

We are looking for energized, self-motivated individuals to work out of our Düsseldorf office.

Responsibilities

Do you want to make a difference, work with state of the art technology as part of a self-driven team? We offer you the opportunity to define your business destiny while you help shape our company. We are heavily expanding into Europe and are looking for you to extend the team in Germany.

Working with the Digital Tempus leadership team, **Business Intelligence & Database Specialists** help companies use their data to capitalize on opportunities to improve business and operational performance through better planning. Business Intelligence Specialists work with client's business and technical resources to first understand their data and then define the data requirements and appropriate transfer mechanism to synchronize with Digital Tempus Business Intelligence Services. Business Intelligence Specialists are also responsible for maintaining data integrity within the Digital Tempus Business Intelligence Services through the use of proper filtering and data cleansing routines.

Business Intelligence Specialists work to support a team of Business Intelligence Analysts to develop advanced data models for clients; sifting and pivoting through large, complex data sets to determine demand patterns and business behaviors.

Digital Tempus Business Intelligence Services are used for detailed demand analysis and to help clients optimize models and parameters within the client's enterprise planning systems, including but not limited to JDA Manugistics, SAP, and Siebel.

Key Capabilities & Required Qualifications

- BS, MS, MBA, or PhD with a focus on MIS, Information Sciences & Technology, or other discipline with a data modeling and data mining emphasis.
- Business Intelligence Tools and Data Warehouse design and development work experience with an analytical emphasis. Preference is given to those with experience solving real-world business problems.
- Experience with database design, implementation and SQL report development.
- Experience building solutions with Microsoft SQL Server Analysis Services (SSAS).
- Experience with requirements gathering, analysis & design of ETL processes using SQL Server Integration Services (SSIS), multi-dimensional databases & OLAP cubes.
- Experience delivering OLAP data to end users (e.g. Excel, ProClarity, Panorama or Microsoft Business Scorecard Manager and knowledge of MDX).
- Proactive and self-starter with significant attention to detail.
- Thoughtful and efficient problem solver.
- Strong analytical and pattern recognition skills, including statistical and mathematical competencies.
- Strong written and verbal communication and customer facing skills. Fluent english is mandatory.
- Intermediate or advanced skills in Excel and intermediate skills in Microsoft PowerPoint and Word.
- Ability and willingness to travel.

Please note that only online applications can be accepted.
